- LinkedIn profile

TECHNICAL SKILLS

Programming languages

- Rust
- TypeScript
- C
- C++
- Java
- Python
- Kotlin
- C#

Python libraries

- NumPy
- Pandas
- PyTorch

Other

- Git
- GitHub
- Strong mathematics

LANGUAGES

- Hungarian Native
- English C1
- German B1

EDUCATION

BSc in Computer Engineering
Budapest University of Technology and Economics (BME)
2023 – Present

INTERESTS

- Sports
- Board games
- Programming

About me

I have always looked for new opportunities and challenges, and I am used to holding my own in competitive situations. I usually find common ground with people easily. I enjoy sports, board games and programming.

Experience

Software Developer Intern

Dlabs

- Contributed to the Mosaic Chain blockchain with smaller development tasks over roughly a year.
- Main project: made an existing indexer Polkadot chain-agnostic — it follows live updates from multiple chains while also walking backwards to backfill historical data.
- Refactored the codebase around proper interfaces so it could be tested easily, and extended the database schema to support multiple chains.
- Updated the UI for the multi-chain data and learned where AI tooling genuinely helps in day-to-day development.

STACK

- Rust
- TypeScript
- Blockchain
- Polkadot

SKILLS

- Refactoring
- Testing
- Full-stack development

C++ Lab Demonstrator (Teaching Assistant)

BME · Budapest

- Helped students solve the laboratory exercises.
- Graded the semester's major homework assignment.
- Compiled the lab entry quizzes: selecting 2 questions per lab that counted towards the students' end-of-semester grade.
- Proctored midterm exams: monitored for cheating and helped with technical problems.

STACK

- C++

SKILLS

- Meeting deadlines
- OOP

Programming Tutor

Freelance · Online

- Tutored students in Python and prepared them for the final school-leaving exam, midterms and other assessments.

STACK

- Python

SKILLS

- Empathy
- Patience
- Communication

Other jobs

Various

- Waiter, server on a boat, stage builder.

SKILLS

- Fast, precise work
- High standards
- Quick learner

Projects

General MiniMax[🔗]

Generic alpha-beta search

Rust

Risk[🔗]

Exact battle probabilities

Python

Rust

Path Finder[🔗]

Path-finding application

C++

Sudoku Solver[🔗]

Any board size

C

LifeSim[🔗]

Life simulator game

Java

AI philosophy

For every task, I first decide which parts need my direct supervision and where the AI can work on its own. Where the core design is at stake, I use it as a pair programmer, not an autopilot: it builds top-down, one small, reviewable step at a time, and I reject and redirect it often, because I want to understand every line that ships.

I give it free rein where correctness is easy to check, or where the work scales horizontally, so a mistake can only break one small piece, not the whole framework. There it can try many solutions and keep the best one. For example, it tried out micro-optimisations on small, performance-critical code much faster than I could have. I mainly use Claude Code, but I have tried many other AI tools as well.
