

Tivadar Bánfalvi-Kovács

Computer Engineering Student

CONTACT

- Budapest, Hungary
- t.banfalvi.kovacs@gmail.com
- +36 70 938 7844
- github.com/BKTB888
- LinkedIn profile

TECHNICAL SKILLS

Programming languages

- Rust
- TypeScript
- C
- C++
- Java
- Python
- Kotlin
- C#

Python libraries

- NumPy
- Pandas
- PyTorch

Other

- Linux
- Math

Preferred AI

- Claude Code

LANGUAGES

Hungarian	Native
English	C1
German	B1

EDUCATION

BSc in Computer Engineering

Budapest University of Technology and Economics (BME)

2023 – Present

INTERESTS

- Sports
- Board games

About me

I have always looked for new opportunities and challenges, and I am used to holding my own in competitive situations. I usually find common ground with people easily. I enjoy sports, board games and programming.

Experience

Software Developer Intern

Dlabs

- Contributed to the Mosaic Chain blockchain with smaller development tasks over roughly a year.
- Main project: made an existing indexer Polkadot chain-agnostic — it follows live updates from multiple chains while also walking backwards to backfill historical data.
- Refactored the codebase around proper interfaces so it could be tested easily, and extended the database schema to support multiple chains.
- Updated the UI for the multi-chain data and learned where AI tooling genuinely helps in day-to-day development.

STACK

- Rust
- TypeScript
- Blockchain
- Polkadot

SKILLS

- Refactoring
- Testing
- Full-stack development

C++ Lab Demonstrator & Programming Tutor

BME & freelance

- BME C++ lab: helped students with the exercises, graded the major homework, compiled the lab entry quizzes and proctored midterms.
- Private tutoring: taught Python and prepared students for the school-leaving exam, midterms and other assessments.

STACK

- C++
- Python

SKILLS

- Communication
- Meeting deadlines
- OOP

Projects

General MiniMax

Rust

Generic alpha-beta search

Risk

Python

Rust

Exact battle probabilities

Path Finder

C++

Path-finding application

Sudoku Solver

C

Any board size

LifeSim

Java

Life simulator game

AI philosophy

For every task, I first decide which parts need my direct supervision. Where the core design is at stake, I work with AI as a pair programmer: top-down, in small reviewable steps, rejecting and redirecting it until I understand and am proud of every line.

I let it work alone and try many solutions where correctness is easy to check, or where the work scales horizontally so a mistake stays local. For example, it micro-optimised small performance-critical code far faster than I could have.
